

Albert “AJ” Snow

479-774-1828 | ajsnow2012@gmail.com | github.com/AlbertSnows | savyb.fly.dev | Chicago, IL

Technical Experience

Certifications: AWS Solutions Architect – Associate

Languages: Python, Java, JavaScript, Clojure, PHP, C#, Rust, C++

Tools: AWS, GCP, Docker, Kubernetes, PostgreSQL, MySQL, Splunk, New Relic

Skills: Software Architecture, System Design, API/REST, CI/CD, Microservices, ETL, DevOps, Database Design

Work Experience

Senior Software Engineer

June 2025 – Present

Capital One

- Delivered cross-team, client-facing AWS automated self-service tool; removed 16 hrs/month of manual tasks
- Led team security compliance across 12+ services and AWS infra; managed reviews, assignments, and coordination
- Reduced on-call overhead by 5 hrs/month by consolidating alerting configuration and documenting incident runbooks
- Modernized domain failover process from several hours to minutes and led the quickest region fallback to date
- Led cross-team service migration across the finish line and resolved 3 associated, critical production incidents
- Team SME for vulnerability remediation, infra migration, API design, and PagerDuty

Senior Software Engineer

Feb 2024 – June 2025

Center for Translational Data Science (CTDS) at University of Chicago

- Architected document ingestion and ETL pipeline end-to-end; reduced delivery turnaround from 2 weeks to ~2 days
- Built AI model output evaluation framework for a research project; reduced ingestion cycle from weeks to days
- Designed search API from requirements through production; 0 reported bugs post-release
- Maintained FedRAMP Moderate compliance across all new cloud-hosted code contributions
- Developed 250+ tests across 6 services to stabilize behavior and resolve logging anomalies
- Supported on-call operations for 30+ active services; PR review, debugging, and pipeline triage

Back-End Engineer 3

April 2022 – June 2023

Peerspace

- Added an external calendar sync integration; reported 30% adoption rate in first two weeks
- Authored 2 technical design docs; collaborated with stakeholders to define scope and architecture
- Added 130+ tests and established company-wide TDD procedures across services
- Designed schema extensions and removed 20+ redundant fields from MongoDB; improved data model integrity
- Resolved dozens of critical software faults through log analysis across 100k–1M daily events in GCP

Software Engineer 2

June 2019 – March 2022

Paycom

- Led design of a core feature that allowed dynamic job field customization; adoption rate of 80% from 10k+ clients
 - Developed software features with a team size of ~17 in a 500k+ LOC domain
 - Reduced development costs by abstracting code design; e.g. refactored code from 1000 to 200 lines
 - Adhered to software and procedural regulations (ISO 9001:2015, SOX, PII) while developing and storing sensitive data
 - Enhanced software services by developing 180+ endpoints for backend APIs, user-facing scripts, and ETL workflows
 - Lowered client wait times up to 100x by optimizing code, aggregating MySQL queries, and tuning ORMs
-

Open Source Contributions

Calva | Collaborated with the lead dev to squash a bug preventing windows users from quick-booting the plugin

Fulcro | Added a feature and documentation to the Fulcro template to build and deploy a production-ready uberjar

Education

Kansas State University (2019)

Bachelor of Science in Computer Science (3.7 GPA)

Projects

Personal Website (CLJS, Fulcro) | A website using ClojureScript and the Fulcro framework for personal use

PM State Machine (Java) | I created a pattern matching engine in Java

Hotshot (CLJS) | Basic API to solve a fun math case; utilized Calva for Interactive Programming

Game Jam Unity Project (C#) | Small game built by me in a weekend featuring lightbulb-themed puzzle platforming

Utility Functions Library (~) | Code designs that are transferable between languages; inspired by lodash and clojure
