

Albert “AJ” Snow

479-774-1828 | ajsnow2012@gmail.com | github.com/AlbertSnows | savyb.fly.dev | Chicago, IL

Technical Experience

Certifications: AWS Senior Solutions Architect (Associate)

Languages: Python, JavaScript, Java, Clojure, PHP, Rust, C#, C++

Tools: AWS, Node/Express, MySQL, Docker, Splunk, GCP, New Relic, PostgreSQL, Kubernetes, Spring Boot

Skills: Software Architecture, Database Design, API/REST, CI/CD, MVC, Microservices, System Design, ETL, OOP, DevOps, Backend, Full-Stack, Leadership, Technical Problem Solving

Work Experience

Senior Software Engineer 2

June 2025 – Present

Capital One

- Delivered cross-team, client-facing AWS automated self-service tool; removed 16 hrs/month of manual tasks
- Owned security compliance across 30+ services, passing every audit with zero critical findings
- Cut on-call burden by 8-10 hrs/month by reducing false positives, consolidating page structure, and fixing root causes
- Modernized domain failover process from several hours to minutes and led the quickest region failback to date
- Led cross-team service migration across the finish line and resolved 3 associated, critical production incidents
- Migrated core service to AWS Secrets Manager, eliminating a persistent security vulnerability with zero incidents

Senior Software Engineer

Feb 2024 – June 2025

Center for Translational Data Science (CTDS) at University of Chicago

- Built and owned search saving API from design doc; 0 reported bugs post-release
- Developed 250+ tests across 6 services to stabilize code behavior and fix various logging anomalies
- Maintained Center’s Fedramp Moderate compliance for all new code contributions, such as aforementioned API
- Developed a metrics analysis tool for an AI research project; expected to reduce ingestion cycle from weeks to days
- Automated manual ETL ingestion workflow, reducing content delivery turnaround from 2 weeks to ~2 days
- Regularly participate in on-call activities for 30+ active services; e.g. PR review, debugging, and pipeline fixes

Back-End Engineer 3

April 2022 – June 2023

Peerspace

- Added an external calendar sync feature; reported 30% adoption rate in first two weeks plus client acclaim
- Developed 2 new technical design docs by collaborating with stakeholders to translate and scope features
- Added 130+ tests and established new company procedures to integrate TDD into services
- Added several fields to the core DB schema and removed 20+ redundant fields from other MongoDB schemas
- Regularly parsed and filtered through ~100k–1M system logs to identify and debug software faults

Software Engineer 2

June 2019 – March 2022

Paycom

- Led design of a core feature that allowed dynamic job field customization; adoption rate of 80% from 10k+ clients
 - Developed software features with a team size of ~17 in a 500k+ LOC domain
 - Reduced development costs by abstracting code design; e.g. refactored code from 1000 to 200 lines
 - Adhered to software and procedural regulations (ISO 9001:2015, SOX, PII) while developing and storing sensitive data
 - Enhanced software services by developing 180+ endpoints for backend APIs, user-facing scripts, and ETL workflows
 - Lowered client wait times up to 100x by optimizing code, aggregating MySQL queries, and tuning ORMs
-

Open Source Contributions

Calva | Collaborated with the lead dev to squash a bug preventing windows users from quick-booting the plugin

Fulcro | Added a feature and documentation to the Fulcro template to build and deploy a production-ready uberjar

Education

Kansas State University (2019)

Bachelor of Science in Computer Science (3.7 GPA)

Projects

Personal Website (CLJS, Fulcro) | A website using ClojureScript and the Fulcro framework for personal use

PM State Machine (Java) | I created a pattern matching engine in Java

Hotshot (CLJS) | Basic API to solve a fun math case; utilized Calva for Interactive Programming

Game Jam Unity Project (C#) | Small game built by me in a weekend featuring lightbulb-themed puzzle platforming
